Linguistics MA Concentration
— a STEM designated-program —

Do you love languages and like to travel?

Like solving complex puzzles?

Would you like to learn about world cultures, discover and unpack amazing ways of speaking, making music and story-telling?

Consider Language Documentation
which will satisfy all these interests

Our faculty are united in the exploration of the complexity and expressiveness of language. This exploration provides the context for coursework and research. Students gain first-hand experience gathering both naturally occurring and experimental data while working closely with faculty on language documentation projects. In addition to covering the fundamentals of language documentation and description, the curriculum at UNT places emphasis on NLP for low-resource languages, data archiving and management, creating and mining interoperable language data bases, ethics of data sharing, and language revitalization through orthography standardization.
